

Crystalline Osmium

The innovative addition the jewelry industry has been searching for

INCREASING IN POPULARITY IN JEWELRY DESIGN & INNOVATION

Designers and goldsmiths value crystalline Osmium for its ability to produce nearly flawless surfaces providing them complete creative freedom in shaping their designs. For example, precision cutting of the metal enables the creation of precise, acute angles unattainable with traditional stones.

Another reason this beautiful metal is gaining in popularity is due to the intrinsic value of the metal. With crystalline Osmium, goldsmiths can create a similar surface to pavé diamonds that sparkles as much or even more so without the extensive work required for setting individual stones. Additionally, the intrinsic value of the crystalline Osmium makes it attractive to the many customers nowadays who are looking to invest in jewelry as a tangible asset.

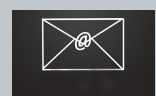

THE RAREST & MOST BEAUTIFUL PRECIOUS METAL

The rarest non-radioactive element in the world also happens to be the most beautiful of all the precious metals. Crystalline Osmium sparkles as much as or more than diamonds. Initially only available as an investment metal, more and more jewelers are now adding crystalline osmium jewelry to their collections.

SCARCITY CREATES VALUE

As the most rare non-radioactive element, the value of Osmium is increasing steadily now that it can be purchased in crystalline form. Developed over a period of over 40 years, the process for crystallizing Osmium produces pieces that are each unique. Every piece has 10,000 more recognition points per square millimeter than a human fingerprint. Thus, it is unforgeable. The value density is so high that you can efficiently store and transport extraordinary value in the smallest physical volume.

These are some of the reasons why crystalline Osmium is so attractive for investors. Its value has increased on average by 15 percent each year since 2017.

STANDARD & CUSTOM PIECES AVAILABLE

Standard crystalline osmium pieces come in a variety of shapes: circular, square, bars, star, letters, numbers to name a few. Over 250 shapes and sizes ranging from 1/8 inch to 4 1/2 inches are available. Custom pieces can also be purchased for a premium. Simply draw the design, and a template will be created for your unique design.
